The .psd files are often used as an intermediate file for the creation and editing of artwork. .psd files can also be exported to other formats for use with other programs. Q: How to return JSON body from a controller in ui-router I have setup my AngularJS application using ui-router. I wanted to read the body of a file being uploaded to my controller. This is being used by a javascript application in the browser. All of this is very basic stuff so maybe I am overlooking something. I would like to make a call to the controller to read the body of the file that is being uploaded and return it as JSON to the browser. I am sure this can be done, but I do not know the correct approach. Can anyone show me the correct approach to this? Or should I be doing this another way? Thank you! A: If you have an AngularJS app where you are receiving a file-upload, then your controller is typically run on the server. From there, you would send a "PUT" request to the url, with the request body being the file you just received. See this article for an example of how to handle file-upload with Angular and the XHR (XMLHttpRequest object). If your controller is to be run in the browser, then you can still handle the file upload like so: AngularJS $scope.uploadFile = function(file) { if (file!= null) { var xhr = new XMLHttpRequest(); xhr.upload.onprogress = function(e) { if (e.lengthComputable) { $scope.progress = Math.round(e.loaded / e.total * 100); console.log("Upload progress: ", $scope.progress); } } xhr.open("PUT", "/upload-path", true); xhr.setRequestHeader("Content-type", "application/json"); xhr.send(file); } } Controller Code app.controller('FileUploadController', function

Brush Basics ---------- Brushes are Photoshop's most common drawing tool. While pens and pencils can be used to draw lines and scribbles, brushes can be used to blur, paint, or draw shapes, like rectangles or ellipses. You can also create text with a brush. Brushing is a good way to make an image look more realistic, if you're looking to make a computer or cell phone photo look like it's from a magazine. Brushes also work quite well for touch-up work, because they can be blended easily, making it possible to paint over mistakes. Brushes come in various shape and sizes, and you can mix and match layers to give you a diverse set of paint tools. A round brush is perfect for creating circles, while a brush that is squared at the tip is good for adding lines. You can also brush over sections of an image with another tool to draw shapes, such as the Eraser tool. Brushes have the same basic set of features. If you're looking for a basic brush, then the New Brush tool might be more appropriate. Tip: To create a new brush, first create a new layer, then open the Brush tool using your "B" key. Brush Controls ---------- Brushes are opened with the Brush tool, which is located at the bottom of the toolbox. Here are the basic brush controls. Size: Use this to change the size of the brush Tip: If you have a soft edge on your brush, or a really fine line attached to the brush, use a different brush size. It'll give a nice edge to the line you're making. Hardness: This determines how hard or soft the brush tip is. The default setting is Hard. Wetness: Depending on your operating system, this setting determines how wet or dry the brush is. Generally, wet brushes are more likely to make dots on the image, and dry brushes are more likely to make a pencil-like line. Tip: Changing the hardness affects whether the brush will soften or roughen your line Opacity: Use this setting to change how opaque or transparent the brush is. The default setting is 100%. Tip: if you change the opacity setting to over 100%, you can modify the amount of transparency. A value of 0
